

## BOOST YOUR POWER WITH DHL INTEGRATION

# EDI

Simplify the management of your  
DHL shipments.

DHL's Electronic Data Interchange (EDI) allows your current IT applications to exchange information directly with our systems – helping you to run a more efficient service with greater features and benefits.

## DHL EXPRESS INTEGRATED WITH YOUR BUSINESS:

- Retain the user interface your teams are familiar with – no need for timely and costly employee training
- Easily produce compliant shipping labels and documentation with DHL GLS
- Compatible with a number of industry-standard EDI Shipment Manifest formats
- Full shipment visibility – receive EDI tracking data for all your shipments at regular intervals
- Tracking and manifest data exchanged via a DHL provided SFTP account

## OPTIMIZE YOUR BUSINESS WITH EDI:

- **Label Creation** – shipment labels returned directly from the DHL Global Label Service
- **Shipment Manifesting** – a number of industry-standard EDI messages supported
- **Tracking** – receive EDI tracking data for all your DHL Express shipments at set times
- **Paperless Trade** – transmit customs invoices in place of printing and attaching them to shipments
- **Returns** – create return shipment labels in advance to include with your export shipments

### Global Label Service (GLS)

EDI implementation includes our GLS solution which allows you to easily print labels on a per-shipment basis:

- No need to create your own software for label creation
- Eliminates the need for you to understand and store DHL data
- Available offline in your own IT environment or online through the API
- With dedicated developer support from DHL experts

Just send your request and receive your pre-rendered label.  
It's that simple!
